Water Saving Tips

- The patented, built-in PRS regulator maintains optimal operating pressure and restricts water loss by up to 70% if a nozzle is removed or damaged. It also ends water waste by eliminating misting and fogging caused by high pressure.

- Save water, stop low head drainage, and reduce water hammer by preventing water from draining out of pipes after irrigation with 1800 Series Sprays featuring Seal-A-Matic™ (SAM) check valves.

- Exclusive Flow Shield Technology provides up to 90% reduction in water loss when a nozzle is removed, preventing potentially costly and unacceptable run-off.

- PCS-090: 0.9 gpm (0.20 m³/h; 3.6 l/m) - White

* With a pressure compensator, outlet pressure will be reduced, but will fluctuate as the inlet pressure changes. A pressure compensator cannot maintain outlet pressure at a constant rate. A pressure regulator establishes and maintains a constant outlet pressure of 30 psi (2.1 bar) as long as the inlet pressure at the spray head is greater than 30 psi (2.1 bar)

**Bold green type indicates recommended nozzle/screen combination to achieve catalog performance at 30 psi (2.1 bar)**

**Bold blue type indicates satisfactory nozzle/screen combination**

Black type indicates a nozzle/screen combination that provides a throw reduction of more than 50%. With these nozzle/screen combinations a uniform spray pattern is not assured and a bubbler effect may result.

**Note:** Screens were tested at 50 psi (3.5 bar) for 10 minutes prior to taking distance measurements. Distances may vary slightly with higher pressures and longer run times.

**Note:** Refer to catalog notation for proper nozzle selection.
